# WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XX.

FEBRUARY EDITION

1925

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

## SEASONABLE NOTES

In this, the first edition of our **CROP SPECIAL** for the new year, we wish to take this opportunity of expressing our appreciation to our many friends for the interest taken in this monthly circular. It is always our desire and purpose to be of real service to agriculture, and to co-operate in any way possible with this end in view. We always endeavor, through these columns, to give our customers seasonable information that will be of help in directing their plans for the coming season.

There are many conditions that affect the market value of agricultural crops, and so it is with seeds. Every farmer should watch these conditions and determine to the best of his ability when is the best time to buy his **Seed** requirements. This is quite an important item, which may mean the saving of many dollars in the course of a year, and we believe that reading this **Crop Special** regularly will be of great help along these lines.

This **Crop Special** will be devoted almost entirely to information regarding seasonable plantings and market conditions generally. For complete information about all seeds for spring use, we refer you to our **new 1925 Catalog**. If you have not received this Catalog, just drop us a postal card and we will gladly forward your copy.

o

## SOWING A SPRING OAT CROP

Where there is a shortage of feed, will mean many a dollar saved if you anticipate having to buy feed before the next crop is finished. A few acres, according to your needs, planted as early as weather conditions warrant, will be ready to cut in plenty of time to put the same land in Cow Peas, Soja Beans, Millet, or other summer crops. The **Burt** and **Fulghum** are the earliest maturing of the spring oats, and both will supply a good feed crop. The **Fulghum** especially makes a very leafy growth, and furnishes a fine quality feed.

Government reports show that there is a shortage of corn in nine Southern States to the extent of 73,000,000 bushels below the 1923 crop, which crop was not even sufficient to supply the demand. With this condition confronting us it is necessary that plans be made to have plenty of feed crops, which will supply our requirements during the year. The price of grain will very likely reach the peak this summer, and the buying of feed on this high market will mean many a dollar lost that could be saved by a little forethought this spring.

## USE ALFALFA, ALSIKE AND SWEET CLOVER AS SUBSTITUTES FOR RED CLOVER

Owing to the high price of Red Clover this year, we are recommending as substitutes the above mentioned clovers, all of which are reasonable in price, and are leaders for both hay, pasture and soil improvers. The seeds we are offering of these clovers are of the highest grade American grown seeds.

### ALFALFA—A Hay Producer of Real Value.

A field of Alfalfa on your farm will mean that you will never be short of feed, besides having a crop that can always be converted into cash. When once established it is far ahead of Red Clover in hay producing and lasting qualities. The deep root system of Alfalfa enables it to withstand unfavorable conditions, and besides is one of our best soil improvers.

The Alfalfa we especially recommend is our **Wood's Pedigree Kansas-Grown Alfalfa**, testing over 99 1/2% pure. This dryland Kansas-grown Alfalfa has been found by repeated tests by us to be superior to all other varieties for the Middle Atlantic States. Starts off growing earlier in the spring than seed produced in the more Northern and Western sections, and will average one more cutting a season.

### ALSIKE CLOVER—The Surest Cropper of All Clovers.

Alsike is considered the hardiest of all clovers, having the ability to withstand greater extremes of heat and severe cold weather better than any other clover. A particularly desirable crop for grazing. Grows thickly, with fine stems and plenty of leaf that makes it a most desirable grazing crop. Due to the fact that not more than half the quantity of seed is required to the acre, and being a surer cropper it is far preferable to Red Clover. Where you have had trouble in getting a stand of other clovers, try Alsike.

### SWEET CLOVER—An Excellent Soil Improving Forage Crop.

Of all the crops which can be used for soil improving purposes, there is none better than **Sweet Clover**, providing its lime and inoculation needs have been met. Will succeed on a wider range of soils than Alfalfa; makes good pasture and hay; high in protein and most desirable as a feed crop for growing stock and milk production. The growing of **Sweet Clover** is an excellent crop to precede Alfalfa, requiring the same bacteria, which gives it the necessary inoculation.

## CHOOSE THE RIGHT GRASSES FOR YOUR PASTURE

Conditions for growing pasture grasses differ considerably in the Southern States. For Virginia, North Carolina and the higher altitude sections of South Carolina and Georgia, our **Special Grass and Clover Mixtures** are admirably adapted. All of the finer hay and pasture grasses and clovers contained in these mixtures will thrive well and furnish good crops in these sections. For the Coastal sections of South Carolina and Georgia the use of **Carpet Grass, Paspalum and Japan Clover** will give fuller and longer lasting pasture.

**Bermuda Grass** is considered a most valuable grazing grass for the above outlined territories. It endures both drought and overflow and gives good grazing from late spring until late fall, a pasture that is relished by all grazing stock, and especially by pigs, which are less likely to injure it by rooting than they do other grasses.

**Paspalum Dilatatum**, called in the South **Dallas Grass**, is a perennial which grows well on all but very sandy soils. While it is considered to endure greater extremes of temperature and more drought than even Bermuda Grass, it will furnish grazing two or three weeks earlier in the spring and later in the fall.

For light sandy soils, especially those of the Coastal Plain section, **Carpet Grass**, like Bermuda, withstands hot and dry weather that is injurious to others. It will not only furnish more grazing than Bermuda Grass, but may be grazed earlier in the spring and later in the fall, and succeeds better than that grass on poor, sandy soils, provided there is enough moisture to give the grass a good start. It does not send its roots as deep as Bermuda Grass, hence is more easily eradicated when no longer desired.

A good combination for summer pasture is made by sowing ten pounds of Bermuda Grass, four pounds of Carpet Grass and five pounds of Paspalum Dilatatum to the acre.

A mixture that is giving good results in Georgia consists of ten pounds Japan Clover, four pounds Carpet Grass and five pounds Paspalum Dilatatum (Dallas Grass) to the acre.

The requirements of this combination are a good, firm seed bed, and, sowing early enough, in Georgia, South Carolina and Alabama between middle of February and middle of March.

## THE MARKET FORECAST

**CLOVERS.**—Red and Sapling have both advanced to a figure almost double that of last spring. The crop this year was even smaller than 1923, which was far below the average. No chance of lower prices for this spring planting. The use of Alfalfa, Sweet Clover and Alsike Clover as substitutes will mean a big saving.

**GRASS SEEDS.**—Market steady, supplies fairly plentiful and no indication for price advances.

**COW PEAS.**—The shortest crop in years. Only a limited quantity available and prices very high. Predictions are that they will bring \$6.00 to \$6.50 a bushel at planting season.

**SOJA BEANS.**—Crop about 80% of normal. Prices very firm owing to shortage of Cow Peas. Indications for higher market and exhaustion of several popular varieties, such as Laredo, O-too-tan, Biloxi and Virginia. Good purchase now.

**Note**—We do not advise the use of Northern or Northwestern grown Soja Beans for planting in Virginia and the South. They do not make the growth of our Southern varieties.

**SEED POTATOES.**—The severe cold weather in Maine will very likely cause considerable damage to stocks and retard shipments for early planting. Market steady to slightly higher values anticipated.

**SEED CORN.**—The situation has developed into the greatest scarcity in years. There is very little corn of strong germination available, and stocks of good vitality will be exhausted before planting season is well begun. Advise early purchases. Buy only tested Seed Corn. Will be glad to mail samples and description of varieties suitable for your soil and climatic conditions.

**GENERAL.**—Conditions as a whole on the entire Seed line are bullish, and advise early purchases or booked orders. All orders placed with us for future shipment we will guarantee price against our decline.

Do not miss the opportunity of sowing grasses and clovers on your fall sown grain crops, as they furnish one of the best seed beds for early spring planting, and is a safe plan for obtaining a better stand for either grazing or hay.

## VIRGINIA 2nd CROP IRISH COBLERS

### GROWN FROM CERTIFIED MAINE GROWN SEED.

A superior potato for planting in Virginia, as well as the Western and Southern States. They are smaller in size than Maine grown seed, cut to better advantage and more economical for planting. Second Crop Potatoes are acclimated to our Southern growing conditions, and consequently are a surer cropper.

We are continually receiving letters from our customers as to the high yielding and uniform qualities of Second Crop Seed. With these many reports from practically all sections of the East, and the increasing demand, we can recommend them strongly for your planting this spring. We are listing a few reports below, which will speak for themselves.

We can also supply **Virginia Second Crop Red Bliss Potatoes** which are grown under the same climatic conditions as the Cobbler. This variety is earlier in maturity and very popular in some sections where an early potato is desired.

The **Maine Grown Irish Cobbler** and **Red Bliss** potatoes that we are offering again this year, were grown under the direct supervision of the Maine Potato Growers Exchange. Our experience in handling these potatoes has been entirely satisfactory, being true to type and first-class seed stock in every respect.

### Yielded 200 Bushels Per Acre Without Spraying.

The **Certified Maine Grown Irish Cobbler Potatoes** secured from you last spring produced a very fine crop, very smooth potatoes. On account of the crop being further advanced when late rains came the yield was not quite as good as from the **Virginia Grown Second Crop Cobblers**. The **Virginia Grown Second Crop Cobblers** produced at the rate of 200 bushels to the acre without spraying. The tubers were large, many quite large, smooth and were easily sold on a glutted market.—J. C. BEAVERS, Guilford County, N. C., December 3, 1924.

### A Better Yield Than Any Variety Planted.

The **Virginia Grown Second Crop Irish Cobbler Potatoes** which I ordered from you last year yielded more and turned out better than any I have yet planted. Anyone wishing to do well and have a good crop won't be hurt by planting **Virginia Grown Second Crop Irish Cobblers**. We had a bad wet spell and a bad freeze followed; but my potatoes did doubly good at harvest time. Your seed is yet good enough for old Orange County.—CHARLIE RICHARDSON, Orange County, N. C., Nov. 17, 1924.

**DWARF ESSEX RAPE** will give a good pasture crop in six to eight weeks, and is valuable where a quick pasture is needed. Early seedings make a very palatable feed for sheep, horses, cattle and poultry. The stock we are offering is the **Genuine Broadleaf** variety, and from actual field tests is far superior to ordinary Rape generally sold. Sow in drills three to four pounds per acre, or six to eight pounds broadcast. Heavier seedings not advisable, for when sown too thick the quality and quantity of forage will be greatly reduced.

**CANADA FIELD PEAS** and **OATS** sown together make an excellent feed and can be sown as early as weather conditions permit. This combination will furnish a nutritious feed, which is most desirable for feeding hogs and all kinds of cattle, having fine fattening and milk producing qualities. Sow one bushel of peas with one and a half bushels of oats per acre.

In regard to **Red Clover**, we have both American grown and Northern French Red Clover, with some difference in price. We do not handle Italian Red Clover, as we have found by repeated tests that it is not suited to our climatic conditions. The Northern French Red Clover has made a growth in Virginia practically equal to American grown seed, but no Red Clovers seem to have the lasting feature they had in former years. Therefore, if any of our customers desire a permanent pasture we undoubtedly recommend Alfalfa or Alsike as being, in our opinion, much more permanent than Red Clover.

## GARDEN SEED PRICE CHANGES

In consequence of conditions that were not apparent when our Catalog went to press, we have to make the following price changes from those printed in our 1925 Catalog:

<b>Bountiful Beans.....</b>	By mail postpaid, lb. <b>45c.</b> ; 2 lbs. <b>75c.</b> ; 5 lbs. <b>\$1.65</b> ; 10 lbs. <b>\$2.95</b> .
<b>Giant Stringless Green Pod...</b>	Not prepaid, lb. <b>35c.</b> ; 2 lbs. <b>60c.</b> ; 5 lbs. <b>\$1.40</b> ; 10 lbs. <b>\$2.60</b> ; 100 lbs. <b>\$24.00</b> .
<b>Burpee's Stringless Green Pod</b>	
<b>Tennessee Green Pod.....</b>	

*J.W. Wood & Sons, WOOD'S SEEDS Richmond, Virginia.*

**SELECTED SEED CORN**

GROWN ESPECIALLY FOR SEED PURPOSES. NUMBER  
AND RECLEANED.

For Descriptions See Pages 64 to 67 of Our 1925 Catalog.

WHITE VARIETIES:	Per peck.	Per bus.
Improved Virginia White Dent	\$1.15	\$4.00

Cracked Corn	.45	1.65	3.20
Nica Spar Cubical Grit (3 sizes)	.30	.70	1.25

White Oats for Feed, 90c. per bushel.

Charcoal, 2-lb. carton, 20c.; 50-lb. paper-lined sack, \$1.50.

White and Yellow Corn, \$1.70 per bushel.

Pratts Growing Mash with Buttermilk, 10-lb. bag, 60c.; 25-lb. bag, \$1.25; 50-lb. bag, \$2.35; 100-lb. bag, \$4.40.

**WOOD'S SPECIAL  
GRASS AND CLOVER SEED MIXTURES**

**MIXTURES Nos. 1 to 5 FOR PASTURAGE**

**MIXTURES Nos. 6 to 9 FOR HAY MIXTURES**

Nos. 1 and 6. For light gravelly or sandy soils.

Nos. 2 and 7. For good loam soils.

Nos. 3 and 8. For heavy or loam soils.

Nos. 4 and 9. For moist bottom land.

No. 5. For wet bottom land.

Sow at the rate of 30 to 35 pounds per acre.

Prices of above Mixtures f. o. b. Richmond. 100-lb. lots and over, 18½c. lb.; 50-lb. lots, 19c. lb.; 10-lb. lots, 20c. lb.

**MEADOW MIXTURE No. 10.**—Contains a greater number of grasses and clovers, and recommended for sowing on practically all kinds of soils for either hay or pasturage. Prices: lb., 25c.; 10-lb. lots, 22c. lb.; 50-lb. lots, 20½c. pound; 100-lb. lots, 20c. pound.

**WOOD'S LAWN GRASS SEED**

**WOOD'S EVERGREEN LAWN GRASS**

A mixture composed of the finest grasses. Well adapted for use in the central and western sections of North Carolina, all of Virginia and the Northern States. With a little care and attention, **Wood's Evergreen Lawn Grass** in these localities will furnish a beautiful green all-year-around lawn. It does not contain any of the coarse grasses, only the best turf grasses being used.

Prices not prepaid: lb. 35c., 10-lb. lots, 32c. lb.; 50-lb. lots, 30c. lb.; 100-lb. lots and over, 29c. lb.

**WOOD'S DIXIE LAWN GRASS**

In the eastern section of the Carolinas and the Southern States, where the finer grasses will not stand the hot summer months, our **Wood's Dixie Lawn Grass** is just what is needed to give a year-around beautiful green lawn. This mixture contains grasses that will thrive during the fall, winter and spring months, together with Carpet and Bermuda Grass, which will take possession during the summer. For putting in a new lawn, you will find that this Lawn Grass will give you better results than any other combination of grasses.

Prices not prepaid: lb. 40c.; 10-lb. lots, 35c. lb.; 50-lb. lots, 33c. lb.; 100-lb. lots and over, 32c. lb.

**WOOD'S HIGH-GRADE FERTILIZERS**

**OUR OWN BRANDS**

**STANDARD VEGETABLE FERTILIZER.** Available Phosphoric Acid 8%; Ammonia 3%; Potash 3%. Bag of 50 lbs., \$1.00; 100-lb. bag, \$1.90; 200-lb. bag, \$3.70; per ton, \$35.00.

**STANDARD POTATO FERTILIZER.** Analysis 8-3-6. Bag of 100 lbs., \$1.95; 200-lb. bag, \$3.70; per ton, \$36.00.

**STANDARD CORN FERTILIZER.** Analysis 12-2-4. Bag of 200 lbs., \$3.50; per ton, \$33.00.

**STANDARD COTTON FERTILIZER.** Analysis 8-3-3. Bag of 200 lbs., \$3.70; per ton, \$36.00.

**WOOD'S MARKET GARDEN FERTILIZER.** Analysis 8-5-3. Prepared especially for market growers. Bag of 200 lbs., \$4.20; per ton, \$40.00.

**STANDARD GRASS AND GRAIN FERTILIZER.** Analysis 12-2-2. 100-lb. bag, \$1.90; 200-lb. bag, \$3.60; per ton, \$34.00.

**STANDARD BONE MEAL.** Analysis: Ammonia 3%; Phosphoric Acid 22%. Bag of 200 lbs., \$5.00; per ton, \$48.00.

**ACID PHOSPHATE.** Analysis: 16%. Bag of 200 lbs., \$2.10; per ton, \$20.00.

**NITRATE OF SODA.** 100-lb. bag, \$3.60; 200-lb. bag, \$3.80; per ton, \$67.00.

**PULVERIZED LIME STONE.** Bag of 200 lbs., \$1.10; per ton, \$9.50.

**WOOD'S HIGH-GRADE SHEEP MANURE.** 25-lb. bag, 85c.; 50-lb. bag, \$1.50; 100-lb. bag, \$2.75; 500 lbs., \$12.50; per ton, \$47.00.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions only.
